

Personal Computer Applications

COMP6000 Semester Project Proposal

Zhitao Gong, Xing Wu

February 18, 2013

1 Introduction

Personal Computer Applications at Auburn is a website aiming at inspiring more students to choose careers in IT and computing.

It contains information about related courses, e.g. schedules, syllabus, instructors, etc. and also various updates about summer camps and etc.

2 Proposed Work

The original site was implemented using ASP.NET. But considering the website's aims, structures and features, it's more of a static website. So we propose to re-implement it using *Jekyll*, a static site generator, with the following goals:

- Restructure the website to make it more user friendly.
- Platform independent.
- Easy to maintain and update.
